

GCC Hackday'15

www.girlscodecamp.org | girlscodecamp@gmail.com

Details

GCC HackDay is a competition that aligns with our larger mission to foster a stronger sense of community among young women interested in technology and provide a creative platform for innovation and entrepreneurship.

What's a HackDay?

A chance for participants to form a team, work on something they are passionate about, and turn it into a working prototype - otherwise known as a “hack.” It's an opportunity for students to form a team, code for several hours consecutively, create something awesome, and present it to the judges to win prizes.

Why a HackDay?

The HackDay is intended to help students find a community and the inspiration to turn their crazy ideas into a reality. For the girls who attended our summer boot camps, we hope this will be an opportunity to leverage the skills they learnt to build something innovative. For the others, we hope this will be a chance to learn and discover the endless possibilities of technology.

When, where and who?

The event is planned to be on **December 26, Saturday from 8am to 8pm**. We are currently in conversation with multiple tech companies in Hyderabad about the possibility of using their space to host the hackathon. We welcome all young women to participate, with or without programming experience and expect over 100 students to participate.

How can my organization help?

Venue

We would love to have our participants hack at your organization! We're looking for a space that can accommodate up to 100 students to hack!

Money

With the help of your sponsorship, we'll take care of breakfast, lunch, and snacks for all participants. We will also rent laptops for students to work on, give prizes to the top

three teams at the end of the day and buy publicity materials such as banners and flyers to promote the event.

Hardware

If your organization has laptops (or any other kind of hardware) that the students can hack on, we would love to have the students try them out! In addition to day-long loans to teams, hardware donations can also be used for raffle and final prizes.

Mentors and Judges

Our participants love to learn! We invite your teachers or engineers to attend as mentors for the day, whether by mingling with attendees or by running workshops. If an engineer cannot attend during the day, we are also looking for judges to review our participants' submissions at the end of the hackathon.

Sponsorship Tiers

	Silver Rs.25,000	Silver Rs.50,000	Platinum Rs.1,00,000
